

7. Project Documentation Phase

1. INTRODUCTION

The Project Documentation Phase is the seventh stage in the development of **LegalEase AI**. In this phase, all the important information related to the project is collected, organized, and presented in a structured format.

The documentation explains the problem statement, objectives, proposed solution, technologies, tools, APIs, system design, development procedures, and testing methods used in the project. Relevant screenshots and implementation details are also included to show the actual development and working of the application.

The main purpose of this phase is to maintain a clear and complete record of the LegalEase AI project for understanding, evaluation, and future reference.

2. OBJECTIVES

The main objectives of the Project Documentation Phase are:

- Document the complete LegalEase AI project.
- Explain the problem statement and project objectives.
- Describe the proposed AI-based solution.
- Record the technologies, tools, and APIs used.
- Document the system design and development process.
- Record the testing methods and observations.
- Include relevant screenshots and project outputs.
- Present the project information in an organized manner.

3. DOCUMENTATION WORKFLOW

The compilation of documentation follows a systematic logical order across all project phases:

4. DETAILED EXPLANATION

The documentation begins with the project introduction, which explains the purpose of LegalEase AI and its role as an AI-powered legal assistance platform.

The problem statement and objectives explain why the project was developed and what it aims to achieve.

The technology section records the software, libraries, APIs, and development tools used in the application.

The system design section explains the architecture and communication between the frontend, backend, and AI/LLM components.

The development section records the procedures followed to create and integrate the application components.

The testing section records the testing methods, observations, errors identified, and corrections made during the testing phase.

5. DOCUMENTATION STRUCTURE

The final LegalEase AI documentation is structured comprehensively as follows:

```
LegalEase AI
├── Introduction
├── Problem Statement
├── Objectives
├── Requirement Analysis
├── Project Design
├── Project Planning
├── Project Development
├── Project Testing
├── Screenshots & Outputs
└── Conclusion
```

This structure keeps all vital project records synthesized within a unified reference manual.

6. SCREENSHOTS AND IMPLEMENTATION DETAILS

Relevant screenshots are incorporated to visually demonstrate the working implementation of LegalEase AI, including:

- Application home page
- User input interface
- Legal query submission
- AI-generated response
- Backend / API output

- Testing results
- Final application screen

Screenshots provide visual proof of development functionality and system execution flow.

7. EXPECTED OUTCOME

At the conclusion of the Project Documentation Phase, a complete and organized project document is prepared, detailing problem statements, technology choices, system design, testing observations, and visual execution outputs.

8. PHASE CONCLUSION

The Project Documentation Phase provides a complete record of the LegalEase AI development process. It aggregates insights across all preceding stages into a clear, structured deliverable, offering invaluable reference for project evaluation, demonstration, ongoing maintenance, and future enhancements.
